

Who We Are

ECI Telecom delivers innovative network infrastructure solutions, unified network management systems and comprehensive lifecycle services to carriers and service providers, worldwide.

About Our Products

ECI's best-of-breed products and technological advancements have always been industry needs-driven and standards-based, delivering superior density and flexibility for features and interfaces, offering the ultimate migration path to next generation infrastructure.

Apollo Family

The Apollo family is ECI's next generation solution for converged packet-optical platforms, optimized for the long haul and metro network segments. Its state-of-the-art system is optimized for the transition from hybrid networks to NGNs, providing a cost-effective solution for the challenges presented by current and future needs. Apollo products come in a variety of platform sizes and capacities addressing different network locations and their modular architecture enables in-service system upgrades to support the ever increasing number of channels expected from future-ready optical platforms.

Native Packet Transport (NPT) Family

NPT is ECI's packet based transport product line addressing operators' needs for building packet transport networks (PTN) with low TCO. This family of future-proof and carrier-class converged multiservice packet transport platforms are optimized for metro Packet Transport Networks. Its All-Native architecture enables cost-effective support for mixed packet and TDM traffic while preserving existing network structure and working procedures, for smooth transition to an All-Packet model.

XDM® Series

The XDM product line is a series of robust multiservice provisioning platforms (MSPPs) optimized for the metro. This multiservice product line integrates all leading transport technologies, protocols, and schemes, supporting both Carrier Ethernet and TDM services natively over the same infrastructure. Its build-as-you-grow™ architecture allows progressive scaling of network switching capabilities, efficient development of the metro as market demands drive new features and call for more rigorous requirements.

BroadGate® (BG) Series

The BroadGate (BG) product line is a family of flexible, cost-effective, micro multiservice packet-optical platforms that are compact in size yet rich in capabilities. Optimized for the cost-sensitive access and metro-access segments, they support a wide range of carrier class Ethernet, SDH, PDH, and PCM services, from n x 64 Kbps up to 10 Gbps. The BG line's attractive cost/performance value and compact sturdy enclosures make it ideal for mobile backhaul applications, utility companies, and aggregation of triple play residential services in the metro access.

Hi-FOCuS®

The Hi-FOCuS family offers a wide range of scalable solutions designed for any access network deployment scenario for the CO, sub-CO Fiber-to-the-Curb (FTTC), Fiber-to-the-Building (FTTB), and Fiber-to-the-Home (FTTH). Hi-FOCuS provides an End-to-End solution for Open Access architectures where multiple service providers are granted access rights to provide competitive and differentiated services to end users.

B-FOCuS™

The B-FOCuS family provides a comprehensive line of high-speed, user-friendly, xDSL-based CPE. It includes asymmetric and symmetric equipment for ADSL2+, VDSL, and Fiber-to-the-Home (FTTH) applications, delivering maximum performance and ease of use.

Management Systems

ECI boasts a full portfolio of management solutions for network end-to end provisioning, real-time performance monitoring and analysis, fault management, and a comprehensive user-friendly network view. Our unique multidimensional approach to managing today's converged networks gives network managers the capability to ensure carrier class reliability for legacy as well as NG services, while identifying and resolving potential bottlenecks before they become problematic. Our management systems include our flagship multidimensional LightSoft NMS, plus an entire family of intelligent element management systems for the various product families.
